### Technologies and Frameworks:

Git, GitHub, React, Bootstrap, Express.js, Node.js,

### Other:

Scrum, Photoshop, Intelij, Visual Studio Code, Windows, macOS, Linux, Trello

## Projects

---

### Stilts

A project I am currently working on created with **HTML**, **CSS**, **React**, and **JavaScript**. This website is a social network designed for gamers to search for other gamers to play games with.

<https://github.com/Caeg/Stilts>

### UNO

Developed a website in **HTML**, **CSS**, **Bootstrap**, **JavaScript**, and **Java** which allows for users to play games of UNO with up to 8 players online. Implemented a chat system via **Socket.io** and stored account information and game data via **Express.js** and **Heroku**.

<https://github.com/Caeg/Uno>

[csc667-uno.herokuapp.com](https://csc667-uno.herokuapp.com)

### Gator Trader

A buying and selling website created with **HTML**, **CSS**, **Bootstrap**, and **JavaScript** for front end visuals, account creation, messaging and for uploading postings and photos. Used the web template engine, **Nunjucks**, for easier code review and increased responsiveness and stored all user account data in **node.JS** and **Express**.

<https://github.com/Caeg/GatorTrader>

### Personal website

My personal website created with **HTML**, **CSS**, and **Bootstrap** to implement front end functionality such as buttons, button animations, photos, and modals. Used **JavaScript** to create animations for card flipping as well as animations to compare two photos.

<https://github.com/Caeg/CaegSite>

<https://Caeg.gg>

### Tank Game

A tank game coded in entirely **Java** with an implemented split screen, sprite loading, health bar system, and 360-degree rotation.
